

Phase 1: Problem Sourcing

GitHub Repositories

filter by stars > &&
keyword=embedded

PR Filtering Pipeline

Merged status, linked issue, includes
tests, etc.

Curated Problem Set

Categorized by type

Phase 2: LLM Interaction

Problem Instance

Repo snapshot @ commit
+ failing test
+ issue description

LLM Generates Patch

using a vanilla coding agent

Patch Applied to Repo

Phase 3: Evaluation

Simulation Layer Router

host native / ISA emulation

Test Execution

Deterministic pass/fail runs

Metrics Aggregation

Pass rate, patch quality,
per-category breakdown
